Subject: Product Complaint - Suspected Contamination in Batch #MC-2201-A (Amoxicillin 500mg Capsules)

Dear Quality Assurance Team,

I am writing to formally report a quality complaint regarding Amoxicillin 500mg Capsules, Batch #MC-2201-A, Lot #A22015B, with an expiration date of 11/2027, which was received at our pharmacy on February 20, 2026, from your authorized distributor, Central States Drug Supply.

On March 2, 2026, our dispensing pharmacist noticed unusual discoloration and a foreign particulate matter (small dark specks) inside 3 capsules from a single bottle (Bottle Control #071455) during routine visual inspection prior to dispensing. The affected capsules were immediately quarantined and were not dispensed to any patient.

We have withheld the remaining 27 bottles from this shipment from sale pending your investigation and response. Photographs of the affected capsules and the original packaging have been retained and are available upon request.

We request that MediCore Pharmaceuticals Inc. conduct a formal investigation into this matter, including confirmation of whether other units from this batch may be affected, and provide us with your findings and any corrective action taken. Please also advise whether a product recall or return authorization is warranted for the remaining stock.

We take patient safety very seriously and would appreciate a written response within 10 business days. Please contact our pharmacist-in-charge, Dr. Anita Rao, at the number listed above to coordinate return of samples or further investigation as needed.

Sincerely,

Anita Rao, PharmD

Pharmacist-in-Charge, Riverside Community Pharmacy
