Subject: Product Quality Complaint with Associated Adverse Event - Solaprex Injectable Suspension, Lot #SLX-2245

Dear Pharmacovigilance Team,

This letter is to formally report a product quality complaint involving Solaprex Injectable Suspension 40mg/mL, Lot #SLX-2245, Expiration 01/2028, administered to a patient at our facility on March 3, 2026.

Prior to administration, the attending nurse observed visible particulate matter and unexpected cloudiness in the vial contents, which was inconsistent with the clear-to-slightly-opalescent appearance described in the product's prescribing information. Administration was halted immediately after a small partial dose had already been given, and the patient was monitored per our facility's adverse event protocol. The patient experienced mild injection-site irritation and no other adverse symptoms; no further treatment was required, and the patient has since stabilized without complication.

The affected vial and 6 additional vials from the same lot currently in our inventory have been quarantined. We have also filed an internal adverse event report and, per applicable reporting requirements, may separately report this event through appropriate regulatory channels.

We request that Solara Therapeutics Inc. open a formal product quality investigation into Lot #SLX-2245, including analysis of the retained vial, and provide us with a written summary of findings and any corrective actions. Please advise on proper handling and return of the quarantined vials, and let us know if additional information from our facility would assist your investigation.

Sincerely,

Dr. Samuel Reyes, PharmD, BCPS

Chief Pharmacist, Fairview Regional Medical Center
