

AIVOA – Round 1 Full Stack Developer Assessment

AI-Powered Customer Complaint Management System

Company Website: <https://aivoa.ai>

Objective

Build an **AI-powered Customer Complaint Management System** for the pharmaceutical manufacturing industry using the **reference UI** and **demo video** provided.

Before You Start

Before implementation, please:

- Watch the demo video completely.
- Read this assignment document.
- Research **Quality Management System (QMS)** used by pharmaceutical companies manufacturing **API** and **FDF**.
- Understand the purpose of the **Customer Complaint** module in a QMS.

We are not looking for domain experts. We are looking for curiosity, research, and problem-solving.

Mandatory Technology Stack

- Frontend: **React** UI with **Redux** for state management.
- Backend: **Python** with **FastAPI**.
- **AI Agent Framework: LangGraph.**

- LLMs: Utilize Groq(<https://console.groq.com/docs/models>), specifically **the gemma2-9b-it model** (assume you will create a new API token for this). You may also consider **llama-3.3-70b-versatile** for context.
 - Database: MySQL/Postgres SQL
 - Font: Google Inter.
 - You may use Gemini 2.5 Pro (1-month free trial) or ChatGPT 5.0 for all coding and research, with zero human-written code.
Note: Do not simply copy and paste AI-generated code. Understand what the code does, then implement and adapt it to match the workflow shown in the demo.
-

Implementation

- Follow the workflow demonstrated in the demo video.
- Use the mandatory technology stack.
- The UI doesn't need to match the screenshot exactly, but the demonstrated functionality should be implemented.
- You may create your own realistic pharmaceutical complaint PDFs, emails, or images for demonstration.
- Production-grade OCR or document parsing is **not required**.

Bonus Features *(Optional)*

Additional AI features are highly appreciated.

Examples:

- Complaint Completeness Checker
 - Root Cause Recommendation
 - Duplicate Complaint Detection
 - CAPA Recommendation
 - Complaint Summary
 - AI Risk Classification
-

Deliverables

Submit your assignment using the link below:

Submission Form:

<https://forms.gle/T1PJGg7r1JhYWosH8>

Include:

- GitHub Repository
 - README (Setup & Project Overview)
 - **10–15 minute demo video** explaining:
 - Working of all implemented AI tools
 - Frontend workflow
 - Code flow and architecture
 - LangGraph implementation
 - Key design decisions
-

Important Notes

- AI tools such as **ChatGPT, Gemini, Claude, GitHub Copilot, Cursor, Windsurf**, or similar tools are **allowed and encouraged**.
- **Do not simply copy and paste AI-generated code.** Understand what the code does, then implement and adapt it to match the workflow shown in the demo.
- During the interview, you should be able to explain your implementation and may be asked to modify or extend your solution.
- We value **curiosity, clean code, product thinking, and problem-solving** more than building a perfect application.

Good Luck!

We look forward to seeing your creativity and engineering skills.

Team AIVOA
